# Question: How is data recorded in LPMS with Lockage Type of Open Pass Conditions?

- There are 2 types of Open Pass conditions:
  - ▶ Navigable Pass (N) - The tow traverses the dam instead of the lock (if there is no dam, the vessel actually navigates outside the lock walls)
  - ▶ Open Pass (O) - The vessel traverses the lock with no chambering (both sets of gates open but thru the chamber)
- Lock operators collect LPMS data during both Navigable Pass and Open Pass conditions
- Data is currently included in the monthly averages, but can be de-coupled for analysis

# Live Demonstration

- WISDM 3.0; Navigation Viewer beta version
