Securing the Nation's Future through Water Video

ALEXANDRIA, VIRGINIA. The U.S. Army Corps of Engineers (USACE) is a diverse organization responsible for performing many dynamic and critical missions for our nation and the armed forces. With such variety of missions and historical depth, it is sometimes difficult to capture all of what USACE does. However, the video, "Securing the Nation's Future through Water," does just that.

"Securing the Nation's Future through Water" tells the story of USACE's multiple missions that support and impact the lives of Americans every day. The video emphasizes the ways in which the USACE Civil Works mission supports the nation and strengthens the U.S. economy. See the video and learn more about how USACE partners to make water work for the nation, helps to move goods through USACE maintained waterways, provides power through hydropower plants, and much more in order to secure the nation's future through water.

The video is available on [CorpsConnection](#) and available for download.
