

US Army Corps of Engineers

Institute for Water Resources

BUILDING STRONG®

ARRA job estimation model (2011)

Status: Completed

Purpose: To develop economic impact models to address the impacts of these economic activities associated with USACE missions, as these economic activities are essential components to estimate the comprehensive benefits delivered by the federal government's spending.

Objective: The objective of the Economic Modeling for Estimating Jobs Project is to ensure that United States Army Corps of Engineer (USACE) provide accurate and defensible estimates of local job creation and other economic measures such as income and sales as means to document and manage the performance of the ARRA spending and associated Civil Work program activities.

Benefits: To provide accurate and defensible estimates of local job creation and other economic measures such as income and sales as means to document and manage the performance of the ARRA spending and associated Civil Work program activities.
