BUILDING STRONG®

Coastal Engineering Manual (2010)

Status: **Project Manager:**

In Progress [Charles Chesnutt](#)

Purpose: New science, technology and information have emerged in the last decade that is not only useful to, but essential for coastal engineering and planning in the future. Guidance will be developed and updated to integrate the new technology and information derived from post-hurricane emergency beach fills in support of FCCE, post-Hurricanes Katrina and Rita initiatives, and data gained from monitoring beachfill/soft engineering structures, and the monitoring and inspection of hard structures consistent with assessment management efforts.

Objective: Develop plans for updating the Coastal Engineering Manual and other Corps technical design manuals that deal with coastal engineering. Efforts will continue for the implement plan, and update other guidance.
