

US Army Corps of Engineers

Institute for Water Resources

BUILDING STRONG®

Integrated Watershed Resource Management (2010)

Status: **Project Manager:**

In Progress [Paul Wagner](#)

Purpose: The purpose of this project is to explore and begin to define IWRM in a manner that can be applied to all Corps business lines and in coordination with our federal, state and local partners.

Objective: The objective for the first year of this effort is to develop 2-3 white papers on the use of existing tools developed by IWR/ERDC in the formulation of strategies for implementation of IWRM concepts across all Corps business lines.

Benefits: This project will assist the Corps in developing strategic programs and directions for future planning efforts.

Progress: We have a PMP in place and are discussing our work plan. This section will be updated as appropriate.
