BUILDING STRONG®

Planning Community of Practice Gateway (2010)

Status: **Project Manager:**

In Progress [Erin Rooks](#)

Purpose: The purpose of the gateway is to improve the organization of planning resources for the planning community. The site will consolidate important guidance, information, links, and contacts into one website that connects to existing business line gateways.

Objective: A gateway website will be produced that will contain a planner's library database, searchable functions, links to important planning documents, models, planning centers of expertise, and other information.

Benefits: The benefits of the gateway are that planners will be better able to find guidance, documents, examples, contacts, and other resources. This will consolidate resources from multiple web sites into one. This should reduce the amount of time that planners spend looking for various information and fulfill a stated need by the field and headquarters. It should also improve planning in general through a synergistic gateway that is connected to other related gateways.
