BUILDING STRONG®

Stream Gaging in CWMS (2010)

Status: **Project Manager:**

In Progress [Gerhard Krueger](#)

Purpose: The project purpose is to provide field support to users and HQ for the existing GAGE application during the FY10 (Sep-Dec 2009) data entry system and to provide a design for a replacement GAGE application that will simplify data entry to field users for the FY11 (Sep-Dec 2010) data entry season.

Objective: This Project has two objectives: 1) to maintain and provide field support for the existing GAGE application, and 2) to design a replacement for the GAGE application.

Benefits: The GAGE application provides a common reporting interface for field offices participating in the USGS/Corps Co-operative Streamgaging Program to report field costs to HQ. The national Corps PM for the USGS/Corps Co-operative Streamgaging Program uses this information to transfer funds to the USGS. This projects facilitates efficient reporting of field costs and supports future reporting efforts.

Progress: The first deliverable, Operation and Support of the GAGE application for the FY10 submission period is winding to a close. The second deliverable isn't scheduled to begin until mid-December 09
