

## Dope slap the Army Corpse

### A work in progress

The army corpse of engineers is about ecocide through promotion of the myth of the "export economy," which is the same thing as "military intelligence." The Corpse are the same morons who built the Pentagon and the Bomb. The Corpse exists for one reason alone: destruction of Creation. They are ECOterroRUS; they are not our "partners." The curtain has been drawn back on OZ. But he still thinks we don't see his naked stupidity. They think we don't see. They think that the Rivers are their movie set. Dream on. They actually think that we believe this bullshit that the mean Brazilians are in competition <sup>with</sup> Iowa and Illinois farmers. Cargill, the price fixer to world and Monsanto controls that market too!

The Corpse is part of the USMG, which is capable of any crime including genocide and ecocide and whose primary method is low intensity conflict. The fact that it refus-

es to renounce first use of nuclear weapons shows how certifiable they are. They continue to routinely use Depleted Uranium shells. That is an ongoing criminal act.

In two prior attempts to get through to the Corpse, I spoke about particularities of an agricultural economy that is not export driven, is sustainable and not corrosive to ecosystem health. Next, in the Dubuque Ice harbor, I spoke about how the River ecosystem has become a feculant soup of hydrogen sulfide and how the end of the Mississippi is literally DEAD.

Now I wish to lay out the larger picture. If I know these things, the Corpse knows them too. But, they do a psychic disconnect from their own crimes. The raging fire storms in Florida, New Mexico and Arizona is evidence of legal incompetence. The Army Corpse turned the Florida Everglades into the neverglades, an ecodisaster, for Big Sugar.

The global climate events of the last two decades gives evidence that human induc-

ed Climate Change is THE front and center issue. Climate change is directly related to all of the other problems on the planet. The sole organizing principle of the USMG is National Security. Center for Defense Info. labels human induced climate change caused by warming of the troposphere, the primary national security threat. Pogo was right. The insurance industry does not put it in paranoid CIA terms. But they agree.

There are many contributing factors causing climate change. The principle contributing factor of excessive dumping of carbon gases like CO<sub>2</sub>, CO, CH<sub>4</sub>, N<sub>2</sub>O and thus to catastrophic climate change, besides war and preparation for more war, is the shell game called the export economy. In an intact ecosystem global warming gases are remediated by normal respiration of the biosphere. But deforestation, marine pollution and deliberate wetland destruction has caused chronic bronchitis. And thus, atmospheric CO<sub>2</sub> levels have increased by more than 25% in the last 200yrs. The carbon gas-

es produced by human industry and AG-meatbusiness sets up the most potentially catastrophic threat of any threat in human history.

Stratospheric ozone is the veneer of shellac on our globe which made it possible for life to evolve. It took trillions of primitive shallow ocean creatures three billion years to create enough stratospheric O<sub>3</sub> for land based plants to emerge. Stratospheric O<sub>3</sub> was not made by a corpse of engineers. They made the Nozone layer. Atmospheric testing of nuclear weapons proved to be very corrosive to the Ozone layer. During the Raygun nightmare scientists concluded that a nuclear war would block sunlight for a year, cause mass extinctions, destroy the ozone layer, and be the end of everything. The Atmosphere is the air we breathe.

The troposphere becomes "sealed" by carbon gases; becomes less able to open the windows of the green house to vent excess heat to the stratosphere, making the stratosphere even colder. A colder stratosphere

makes ozone eating chemicals like brominated chemicals, halons, CFC 11, 12, 22 and the hydrochloric acid launched into the Stratosphere by the Space Shuttle, work ever faster to destroy more O<sub>3</sub>. Ozone holes and thinning means more ionizing radiation hitting life on earth. The equation is horrifyingly simple. Each 1% erosion of the O<sub>3</sub> layer presents 100% more full spectrum UV. All land based creatures, including plants, are being bombarded with more ultraviolet light than their 22 nucleic acids can sustain. Amphibian mass extinctions have been linked to increased UV; white people will not be the only causality of the Nozone layer.

All land based fauna and phyla evolved to live with background radiation. Any level above background shortens the life of the organism. High ultraviolet and ionized radiation causes irreparable cellular perturbation, cancers and genetic mutation.

Coming back, the export model is an insane economic model. The export model is

designed to enslave and impoverish people, steal their natural resources, to concentrate wealth, leaving the ecosystem trashed. If it is not, then why does that always happen? The starting premise of the export model is extractive. It begins with the claim that every single economy must have some speciality product, or part or commodity, even if that is only labor, that must then be marketed and exported by multinational price fixer corporations to the entire world. The Corporate interests behind the MAI, WTO, NAFTA and Army Corpse, are the new sovereigns. The governing principle of these sovereigns is that no economy can be allowed to become autonomous from the grip of the forces of globalization. Plutocrats cannot tolerate an economy in balance, which serves the needs of a community of people, and of the creatures which keep them company.

Globalization plays a very large role in global climate change. Globalization, unfair trade demands wage slavery, environmental

destruction and is not "economic." Until the creatures of the earth can evolve to develop biological air, water, food, and solar filters to live in a toxic, radioactive environment, we must reject the forces of globalization and stop this destructive race to the bottom standard.

Globalization is the rat race economic model that the Army Corpse feeds on, was created by, only to "justify" pouring ever more tons of cement, more channellizing, more ecocide. The export model cannot tolerate or coexist with an economy that is sustainable, that is democratic, that is not globalized, that enhances the lives of the people and the ecosystem on which they depend. The export model requires military intervention after the cops of the world have aggressively marketed, subsidized, export of weapons globally and chained the 2/3rds world with debt. If the Corpse's own economists will not dummy up their figures and still conclude that the taxpayer paid expense of a cement project will not

exceed net economic benefits, the Corpse fires the Sweeney. The Corpse are members in the United States Military Government club, the leading global polluters. And the Corpse like the military as a whole takes its orders from and works for the interests of the multinational corporations whose loyalty is only to their bottom lines. They have absolutely no loyalty to this country, none to their workers, nor any qualms of conscience in their environmental abortion. When we democratically protest their WTO, they kick us in the gonads. This is why it is absurd for them to claim that they need to lengthen the damm locks on the Sippi "for the farmers."

Coming back: Twelve of the hottest years in recorded history have occurred since '80. This heat fuels more violent weather events, such as Hurricane Mitch, which destroyed what was left of the infrastructure and economies of Honduras and Nicaragua in 1998 and killed more than 10,000 people. And, it is not just 2/3rds world people being injured.

Polar ice pack melts off Greenland causes cold fresh and salt water to drive the Gulf Stream South. Powerful Polar wind storms have already hit England and France. Couple that with a widening band of drought/desert in the Mediterranean. Couple that with disease carrying mosquitoes coming north to New York. Global average temperatures have risen 1.1 F above preindustrial averages. Average temperatures during the last ice age were only 5 degrees less than they are now.

Over the next century, 2001 ff, scientists expect increases in average temperature from 6 F-25 F. With the heat comes more frequent and severe storms, floods, drought, toxic dust storms, sea surges, crumbling coastlines, salt water intrusion into fresh aquifers, failing crops, dying forests, inundation of low lands, tropical disease pandemics including malaria and denga fever. There will be a worldwide disruption of agriculture and economic collapse. Most large population centers are located at or

near sea level. Hundreds of millions of people will be forced to flee the rising sea or the newly created or expanded deserts. Millions of people will die from drowning, dehydration, starvation, new and old diseases; exposure. Millions of people will be murdered in fresh water wars.

Economic globalization through secret and undemocratic free trade agreements and organizations are the principal contributor to the coming fire storm. The export model is to carbon gases as valley girls are to brainless shopping; there is a lot of gagging in each case. Increased distances between producers and consumers requires vastly increased use of desert house gas emitting transport. Fossil fuel prices can be directly linked to increasing use of fossil fuel, which this insane, over heated economy has brought about. We who are on the fringe of this "economy," including most farmers, are being forced into the bridge abutments to the 21st century. Anyone who says differently deserves several dope

slaps.

It is time for us to say to the Corpse:  
“you have messed enough with Mother  
Earth, stand down soldier, you are relieved  
of duty.” It is time to say to Army stop  
making war on our environment.
