² Mobile homes can be seasonal housing units and vice versa.

ESTIMATES OF HOUSING UNITS SUBJECT TO TIDAL FLOODING - 2000 CENSUS DATA

This map aggregates 2000 census housing unit data by evacuation zone and hurricane tidal flooding vulnerability.

Zone Boundary

Red dots represent mobile homes or groups of mobile homes.

This hurricane storm surge and vulnerability map was produced by the Army Corps of Engineers, Philadelphia District. Map production date Aug. 2006. It is made available for review by state and local government emergency management and other interested agencies. Questions or comments should be directed to Stephen Long - 215-656-6552; stephen.w.long@usace.army.mil

This map is subject to additional quality assurance and editing and should not be generally distributed.

This map reflects potential tidal flooding from hurricanes. Potential flood areas are based on storm surge heights calculated by the National Weather Service's SLOSH (Sea, Lake and Overland Surge from Hurricanes) Model. Categories 1 through 4 refer to the Saffir-Simpson scale of hurricane intensity. Storm surge elevations used here represent "worst case" combinations of direction, forward speed, landfall point and astronomical tide for each category. These surge elevations do not include wave heights that may accompany storm surge.

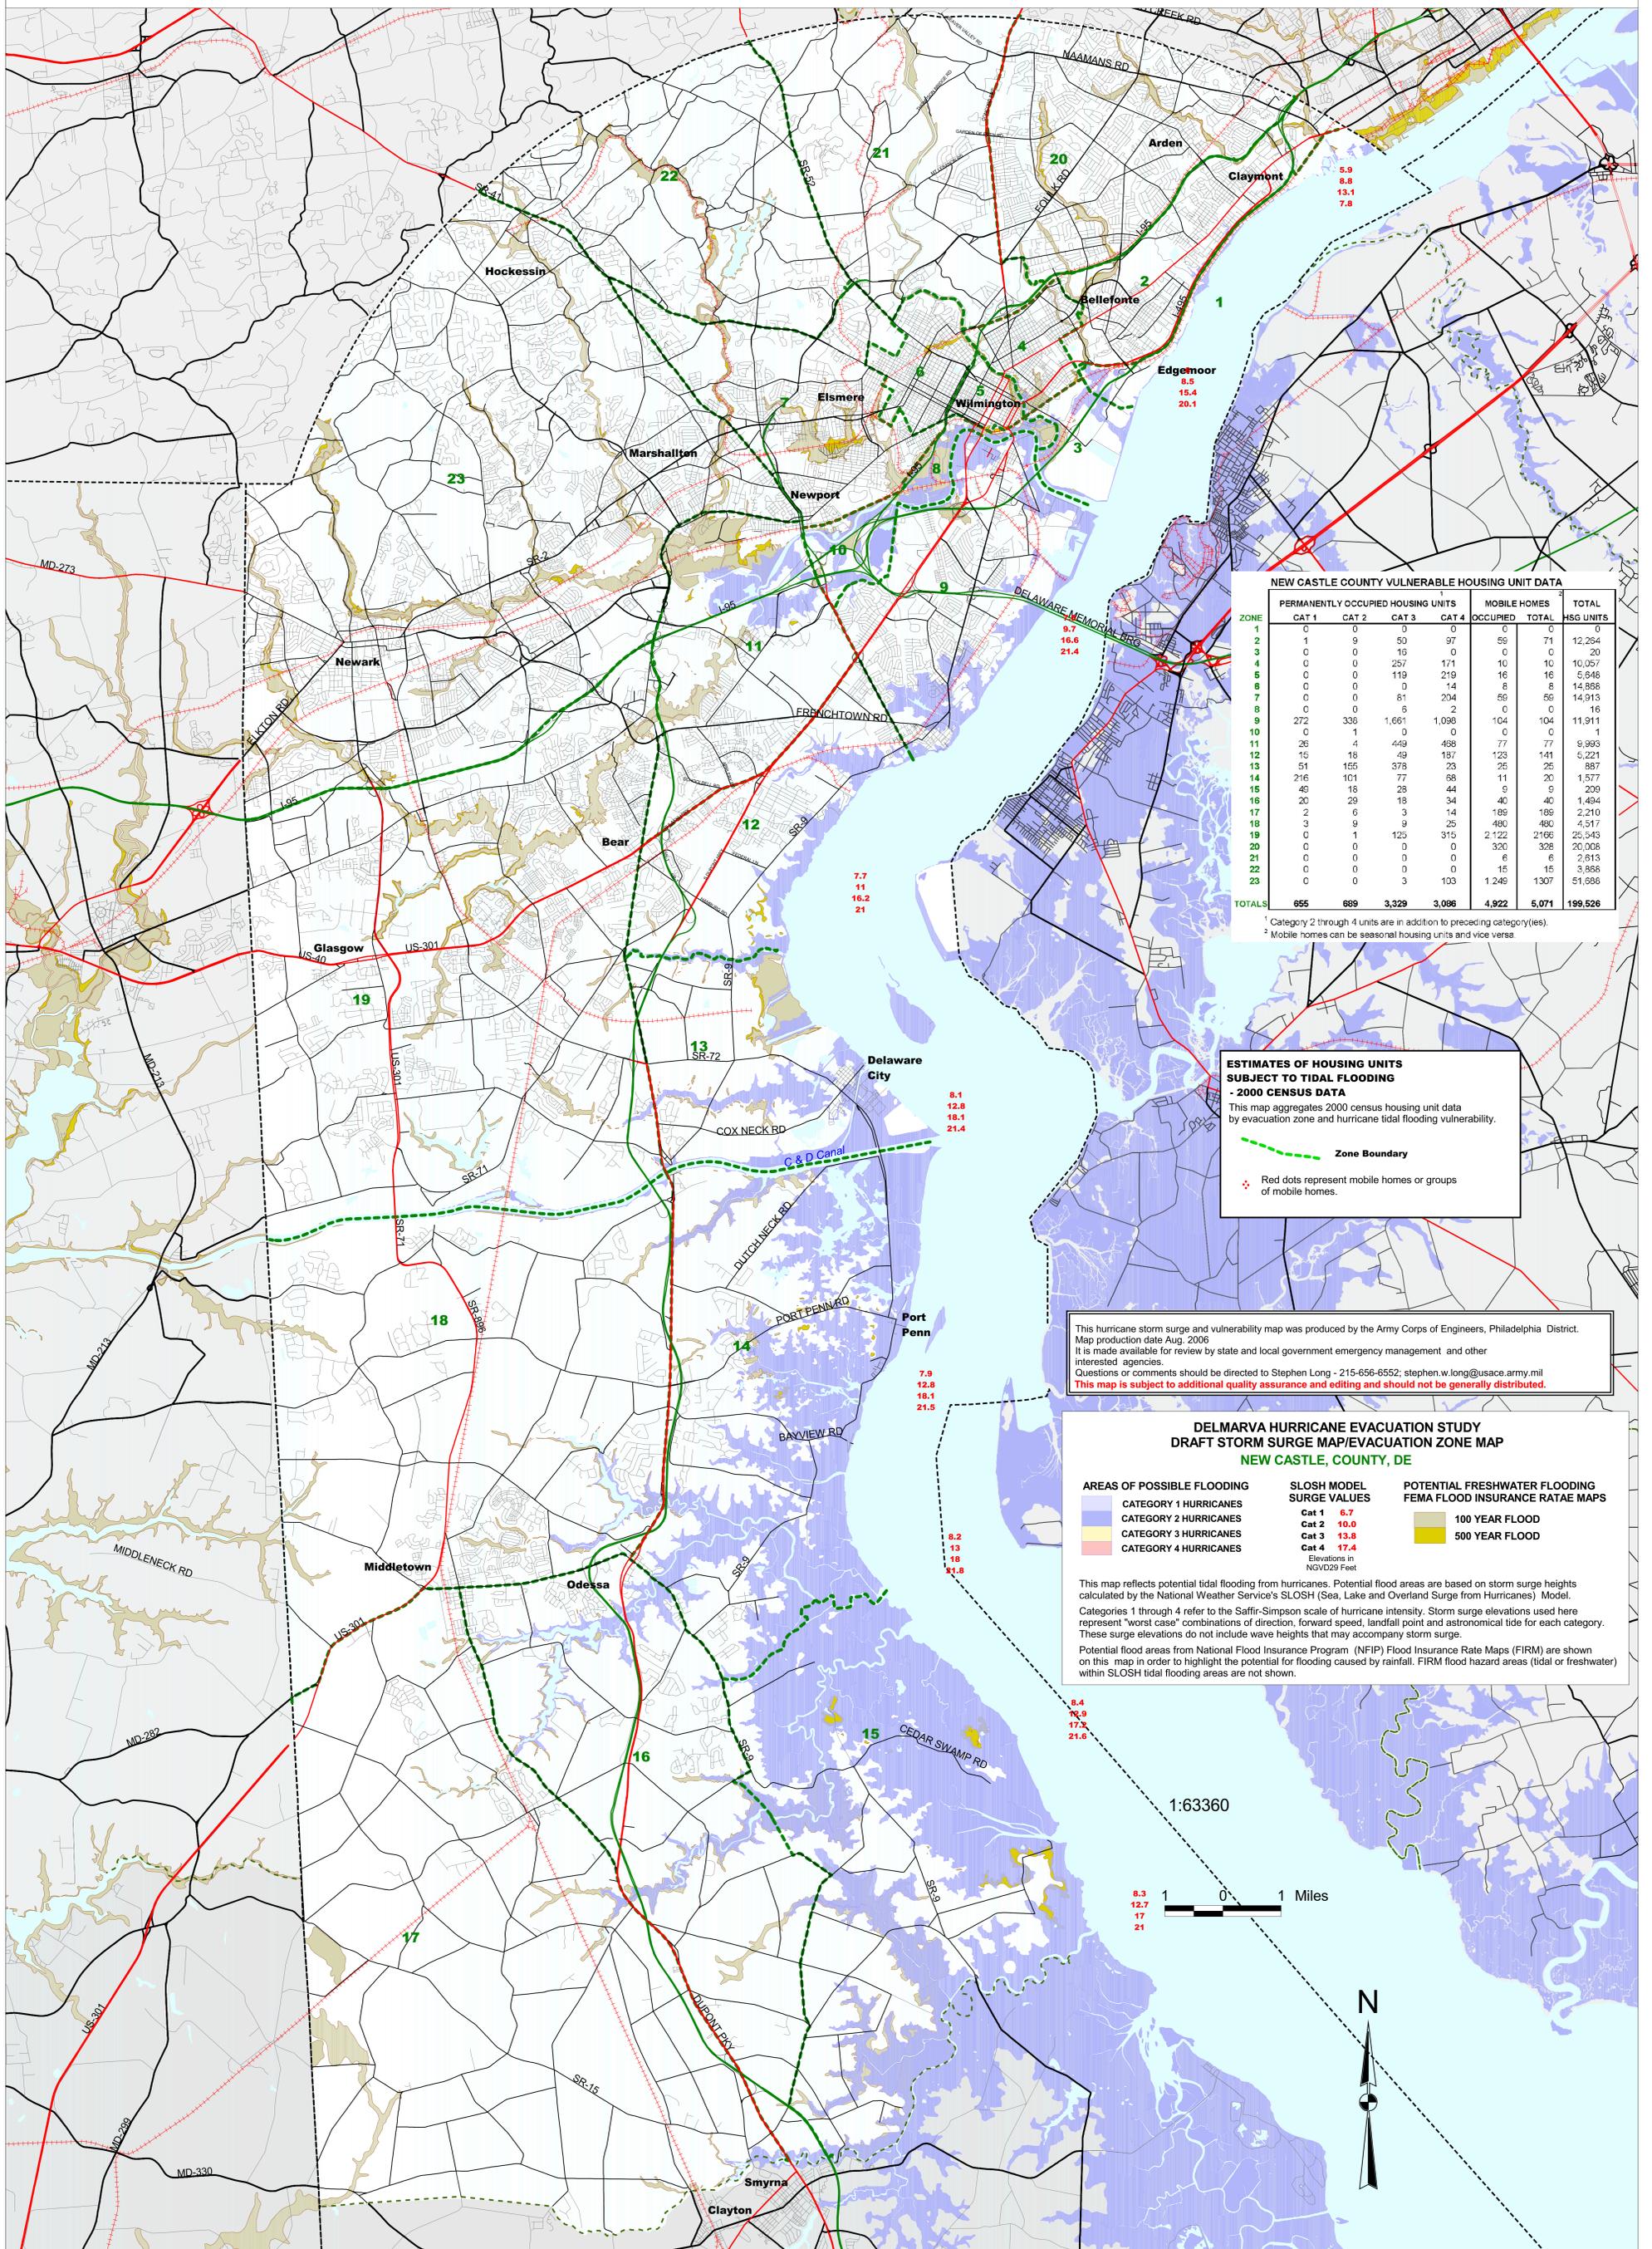

Potential flood areas from National Flood Insurance Program (NFIP) Flood Insurance Rate Maps (FIRM) are shown on this map in order to highlight the potential for flooding caused by rainfall. FIRM flood hazard areas (tidal or freshwater) within SLOSH tidal flooding areas are not shown.
