

NEW YORK STATE HURRICANE EVACUATION RESTUDY TECHNICAL DATA REPORT

for New York City, Nassau, Suffolk, and Westchester Counties

5 | SHELTER ANALYSIS

INTRODUCTION

PURPOSE

The **shelter analysis** considers shelter locations, vulnerability to storm surge, capacities for each location, demand for shelter space, deficits or surpluses of available space, and shelter inventories. One destination of choice is public shelters. Therefore the purpose of the **shelter analysis** is to estimate the number of evacuees that will be seeking public shelter and determine the number of shelter spaces available. State and County emergency management offices then use this information to anticipate sheltering needs and to develop plans to insure that evacuees seeking public shelter will have adequate and safe shelter space. NYCOEM has also recently made the City's public shelters pet friendly to accommodate evacuees and their animals.

GENERAL

The **shelter analysis**, performed by the U.S. Army Corps of Engineers (USACE), considers shelter locations, vulnerability to **storm surge**, capacities for each location, demand for shelter space, deficits or surpluses of available space, and shelter inventories. Data developed in the hazards, vulnerability and behavioral analyses is also used to perform the shelter evaluation. One important aspect from the behavioral surveys conducted has been the extremely low **public shelter demand** observed over the last several years. This aspect has been incorporated into the **shelter analysis**. It is important to note that the identification of a shelter in this report does not indicate that the facility will be open and available for every hurricane **evacuation** event. The choice of public shelters for a specific **evacuation** is the decision of City, county and state emergency management officials. Local authorities will open shelters based on a

5 | SHELTER ANALYSIS

variety of circumstances including storm intensity, storm direction, and availability of qualified shelter operators. Furthermore, shelter designation may change based on new construction, structure modifications, ownership changes or other factors impacting shelter selection. This chapter will discuss shelter vulnerability to storm surge and wind, shelter demand (number of evacuees seeking public shelter), and shelter inventories and capacities.

SHELTER VULNERABILITY

Criteria contained in American Red Cross (ARC) publication 4496, Guidelines for Hurricane Evacuation Shelter Selection, are considered when evaluating shelters for the New York State study area. The standards were developed from hurricane studies, hazards information, and research into the structural soundness of potential hurricane public shelters. The ARC, with coordination from local emergency management officials, only opens shelters as necessary. It is vitally important that any government or private entity intending to operate a public hurricane shelter carefully consider the ARC guidelines to ensure the public's safety. Hazards such as rainfall flooding and high winds are also evaluated for the safety of evacuees seeking shelter. Additionally, hurricane **evacuation** shelters should be located in areas above any potential **storm surge** elevations.

SHELTER DEMAND

Public shelter demand is the number of evacuees expected to seek public shelter. Generally, **public shelter demand** increases as the storm intensifies. Also residents in less secure structures have a greater propensity to use public shelter space. For planning purposes, the public shelter demand was estimated for each hurricane evacuation scenario/category for each New York City borough and County (see Table 5-1). The analysis assumes an adequate warning period for an approaching hurricane and sufficient public knowledge concerning the locations of shelters or **evacuation** centers. Given the lack of hurricane experience in the area, shelter demand estimates should be considered an educated guess and are only estimates of the actual shelter demand New York City, Nassau, Suffolk and Westchester Counties may face. One aspect of **evacuations** observed nationally over the years is the extremely low public shelter demand that communities are experiencing relative to expected demand from the study processes. The following are assumptions that can be made in regards to the residents and tourists of the study area:

- Residents—Residents in less secure structures typically have a higher propensity to use local public shelter space more than other residents.
- High-Rise Residents—Due to the number of high-rise apartments and buildings in New York City, these individuals face special risks from hurricanes even if they live safely outside surge prone **evacuation zones**. Many will relocate to safer places within their own buildings while a small portion will seek public shelter.
- Tourists—Tourists in the New York Metro area will most likely shelter at their hotels in the event of a storm, although there is a tendency for tourists to leave an area before any hurricane and return home.
- Special Needs / Elderly Populations—In addition to residents and tourists, these individuals will also add increased demand on public shelter resources. As seen in past hurricane evacuations around the country, these individuals may have special needs such as wheelchairs and walkers and will need to be accommodated.

5 | SHELTER ANALYSIS

Figure 5-1 (Manhattan–A), Figure 5-2 (Manhattan–C), Figure 5-3 (Brooklyn –A), Figure 5-4 (Brooklyn–C), Figure 5-5 (Queens–A), Figure 5-6 (Queens–C), Figure 5-7 (Staten Island–A), Figure 5-8 (Staten Island–C), Figure 5-9 (Bronx–A), Figure 5-10 (Bronx–C), Figure 5-11 (Nassau–1), Figure 5-12 (Nassau–4), Figure 5-13 (Suffolk–1), Figure 5-14 (Suffolk–4), Figure 5-15 (Westchester–1), and Figure 5-16 (Westchester–4), illustrate the range of current **public shelter demand** by **evacuation zone** for each storm scenario/ category (Scenario A/Category 1 Low Tourist and Scenario C/Category 4 High Tourist Occupancy are represented).

Early-on in the transportation analysis, New York City had decided to use the term “scenarios”, but have since moved toward using “evacuation zones”. The use of the term “scenario” corresponds to “evacuation zones”. The following can be referred to for further clarification throughout this chapter:

- Scenario A = Evacuation Zone A = Category 1 Hurricanes
- Scenario B = Evacuation Zone B = Category 2 Hurricanes
- Scenario C = Evacuation Zone C = Category 3 - 4 Hurricanes

5 | SHELTER ANALYSIS

SHELTER INVENTORIES AND CAPACITIES

One crucial aspect of hurricane **evacuation** planning involves the coordination of shelter location and capacity to meet the shelter demand of evacuees in any given storm scenario. In New York City, Nassau, Suffolk and Westchester Counties, when **evacuation** to shelters is either inappropriate or impossible due to the arrival of storm hazards, residents will have to shelter-in-place. It is strongly recommended by local emergency management officials that evacuees stay with friends or family outside **evacuation zones** when possible. However, for those who have no alternative shelter, the New York City Office of Emergency Management (**NYCOEM**) and the counties of Nassau, Suffolk and Westchester have identified public shelter locations.

In addition to identifying shelter locations, New York City also identified **evacuation** centers. To ensure the most efficient use of resources, New York City will ask all evacuees seeking public shelter to report to an **evacuation** center. Each **evacuation** center acts as a coordination hub for an average of five to ten shelters located in non-surge areas. The centers, and their associated shelters, are located in all five boroughs and are referred to as “solar systems” by the City. The centers help ensure that the number of people in each shelter are matched with the appropriate capacities, thus eliminating potential overcrowding or underutilization of particular sheltering facilities. Many of the centers are easily reached via public transportation and some provide parking facilities. **Evacuation** centers will be the **ONLY** places where people may park vehicles. Some **evacuation** centers have no parking available and residents must use mass transit to get to the centers. At the **evacuation** center, evacuees will be assigned to a particular hurricane shelter and may be transported to the shelter by bus or van. The **NYCOEM** has provided the locations of the centers with their corresponding public shelters. **Figure 5-17** (Manhattan), **Figure 5-18** (Brooklyn), **Figure 5-19** (Queens), **Figure 5-20** (Staten Island), and **Figure 5-21** (Bronx) provide graphical locations of the evacuation centers in each of the boroughs. A complete listing of evacuation centers, hurricane shelters, and special needs medical shelters, as provided by the **NYCOEM**, is also provided in **Table 5-2** (Manhattan), **Table 5-3** (Brooklyn), **Table 5-4** (Queens), **Table 5-5** (Staten Island), and **Table 5-6** (Bronx).

5 | SHELTER ANALYSIS

For New York City, as shown in Table 5-1, Scenarios A and B have a surplus in sheltering capacity versus demand. This changes in a Scenario C event as Manhattan and Brooklyn can no longer handle the total potential demand of their residents within their own borough. The shelter deficit is alleviated by redirecting evacuees to neighboring borough **evacuation** centers. For example if a solar system in Manhattan has reached its capacity, additional incoming evacuees would be diverted through the evacuation center to another solar system in another borough. The challenge for the **NYCOEM** will be redirecting those residents previously sheltering in their own borough to then shelter in an alternate site before the arrival of major storms.

Although Nassau, Suffolk and Westchester Counties are different from New York City, these areas also face shelter challenges. As depicted in **Table 5-1**, Nassau, Suffolk and Westchester Counties face serious shortages with no currently identified alternatives. The counties, unlike metro New York City where shelter deficits are alleviated by shuttling evacuees to alternative locations, have public transportation available, but it is not the primary means for evacuees getting to assigned shelters. The counties must address the deficit before a hurricane threatens the area.

Table 5-2 (Manhattan), **Table 5-3** (Brooklyn), **Table 5-4** (Queens), **Table 5-5** (Staten Island), **Table 5-6** (Bronx), **Table 5-7** (Nassau), **Table 5-8** (Suffolk), and **Table 5-9** (Westchester) provide an inventory of potential hurricane evacuation centers (New York City boroughs only), shelters, and their capacities throughout the study area that might be used during an evacuation. The tables show the shelter or evacuation center name, capacity of evacuees it can accommodate, and other critical information. See **Figure 5-22** (Manhattan), **Figure 5-23** (Brooklyn), **Figure 5-24** (Queens), **Figure 5-25** (Staten Island), **Figure 5-26** (Bronx), **Figure 5-27** (Nassau), **Figure 5-28** (Suffolk), and **Figure 5-29** (Westchester) or the interactive maps section of the interactive DVD for graphical shelter locations.
